

Full Regression Test Report

1. Project Information

- **Project Name:** IT342-Dibdib-ClinicCare
- **Date of Testing:** May 9, 2026
- **Branch:** refactor/vertical-slice-architecture

2. Refactoring Summary

The application was fully refactored from a traditional layered architecture to a **Vertical Slice Architecture**.

- **Backend (Spring Boot):** controller , model , repository , and service layers were dismantled and grouped into features/auth , features/users , features/appointments , and features/notifications .
- **Frontend (React):** components and services were grouped into features/auth , features/dashboard , features/appointments , and features/users .

3. Updated Project Structure

```
ClinicCare/src/main/java/edu/cit/dibdib/ClinicCare/features/  
├─ appointments/ (BookingFacade, AppointmentController, etc.)  
├─ auth/ (AuthController)  
├─ notifications/ (WebSockets)  
└─ users/ (User, Staff, Repositories)
```

```
web/cliniccare/src/features/  
├─ appointments/ (BookingModal.js, AppointmentList.js, etc.)  
├─ auth/ (Login.js, Register.js)  
├─ dashboard/ (Dashboard.js, Sidebar.js)  
└─ users/ (staffData.js)
```

4. Test Plan Documentation

The complete test plan can be found in `docs/Software_Test_Plan.md` , covering Authentication, Dashboard rendering, and Appointment workflows.

5. Automated Test Evidence

- **Backend Tests:** Passed (`mvnw test` executed successfully). Context loads properly after refactoring.
- **Frontend Tests:** Passed (`npm test` executed successfully). React App compiles and renders correctly.

6. Regression Test Results

Feature	Status	Remarks
Registration (Patient/Staff)	PASS	Database integration confirmed working.
Login (Patient/Staff)	PASS	Session routing works correctly.
Dashboard Rendering	PASS	All UI components load without import errors.
Appointment Booking	PASS	Slot calculation and facade pattern intact.
Queue Generation	PASS	QueueStrategy generates correct queue numbers.

7. Issues Found & Fixes Applied

1. **Issue:** Package import errors in Java after moving files.
 - **Fix Applied:** Automatically rewrote all imports in the Java codebase to point to the new `features.*` packages and rebuilt with Maven.
2. **Issue:** Relative import paths breaking in React components.
 - **Fix Applied:** Implemented a regex-based migration script to replace old `../common/` imports with precise feature-based imports. Rebuilt with Webpack.

Conclusion: The refactoring to Vertical Slice Architecture was successful and introduced no breaking changes to the business logic or UI behavior.
